

Appendix A: Site Photographs

Photograph No. 1: August 2012. South west corner facing north. View of hedgerow bordering the western and northern boundaries of the property. Vegetation at project location (LP 8) has been cleared.

Photograph No. 2: August 2012. West end of property facing east. View of cleared area at the project location (LP 8), and FOM7-2 vegetation community in the distance.

Photograph No. 3: August 2012. North west end of property facing north east. View of northern hedgerow. View of inactive agricultural land in the foreground.

Photograph No. 4: August 2012. FOM7-2 woodland at the east end of the property. Vegetation species contained within is characteristic of moist upland forest communities.

Photograph No. 5: August 2012. SWT2-5 wetland community within FOM7-2. Site was dry during the August Site Investigation, but wetland indicator plant species such as Sensitive Fern (*Onoclea sensibilis*) were present.

Photograph No. 6: August 2012. Vegetation surrounding dugout pond located west of the residential dwelling.

Photograph No. 7: January 2012. Dugout pond located at the south east corner of the residential dwelling. Pond was frozen over during the Site Investigation

Photograph No. 8: January 2012. Small SWT2-5 wetland located within the eastern FOM7-2 woodland. Site was flooded during the January Site Investigation. Abundant deer tracks and scat present.

Photograph No. 9: January 2012. View of FOM7-2 woodland located east of the residential dwelling

Photograph No. 10: January 2012. View of hedgerow located along western edge of the property.
Hedgerow is dominated by mid age to mature deciduous tree species
